

Bluestock Mutual Fund Analytics

End-to-End Data Analytics Capstone Project

Author: Khushee Yadav

Role: Data Analyst Intern

Date: July 2026

Executive Summary

This project analyzes mutual fund data from collection to dashboard creation. It includes data cleaning, exploratory analysis, risk metrics, and Power BI dashboards. The goal was to identify high-performing funds, understand investor behavior, and provide suitable fund recommendations.

Data Overview

- 40 mutual funds
- 71,960 NAV records
- 32,778 transactions
- 10 datasets
- 9 visualizations

Data Cleaning

- Standardized date formats.
- Filled missing NAV values.
- Removed duplicates.
- Validated transaction amounts.
- Standardized transaction types.
- Checked expense ratios and returns.

Key Findings

Large Cap funds hold the highest AUM. Most investors belong to the 26–35 age group. Kolkata and Hyderabad recorded high SIP activity. Liquid funds showed the best risk-adjusted performance.

Performance Highlights

ICICI Pru Liquid Fund achieved the highest Sharpe ratio (7.68). ABSL Small Cap Fund delivered the highest 1-year return (24.93%).

Recommendations

- Recommend Liquid funds for low-risk investors.
- Target 38 inactive SIP investors.
- Focus marketing on B30 cities.
- Increase awareness among female investors.
- Promote Direct plans due to lower costs.
